

I had set up everything, you just have to drag and drop the prefab of the vfx into your scene and start to use it.

If you want to change the color of the vfx, please Edit in the visual effect graph profiles.

You can also change the shape of the slash if you change the mesh in the Visual effect graph profiles. But be careful because if the UV of your mesh was not right, that would be a mess.

Goodluck, have fun. Please contact me if you have any issues.
